In order to recover deleted files and folders, the program offers a powerful Undelete feature. Use it to recover files that have been accidentally deleted, as well as to restore items you have manually deleted. Titanium Backup also includes a powerful Root Explorer and App Manager that let you backup, delete and restore the currently installed applications. Titanium Backup will give you full control over your device, so you will be able to modify settings, create backups, do a complete backup, restore items and fix problems. To create a new backup, the program will only ask for the time and date of the last backup, and the date and time of the next one. The backup process will be carried out automatically, without any additional steps required from you. After the backup has been completed, Titanium Backup will present you with a list of apps that are new, updated or removed, and let you restore them to the device. The application's main interface can be accessed via four options: Backup, Reset, Statistics and Root Explorer. The Backup option is where you can perform a regular backup, as well as restore a previous backup. To perform a regular backup, go to the Backup option, press the Backup button, and choose a time and date for the backup. To restore a previous backup, do the same, but press the Restore button instead. The Reset option lets you restore your device to its factory settings, including all apps, data, and phone numbers. In case you would like to perform a full backup (including contacts, videos, messages and images), you need to access the Statistics option. Do this by selecting the Statistics tab, and then press the Backup button. You will then be asked for the time and date of the last backup, which will be performed automatically. To perform a full backup, press the Restore button, and the application will then start the backup process.
